

Marine MONDINO

Axe 2 - Equipe PsyR²
PhD in neuroscience

RESEARCH TOPICS

I am a neuroscience researcher interested in source-monitoring processes. My work is dedicated to the understanding of the neural mechanisms that underlie these cognitive processes. I am also particularly interested in how these processes are impaired in psychiatric disorders, in particular schizophrenia.

METHODS

To do so, I use a combination of neuroimaging approaches, such as fMRI and noninvasive brain stimulation techniques, such as tDCS or tACS.

TRAINING

- PhD in Neurosciences (Lyon 1 University)
- Post-doctoral fellow in experimental medicine at Laval University (Québec, Canada) & Recipient of post-doctoral fellowship from the Canadian Institutes of Health Research
- Regular researcher at the CH le Vinatier (CRNL, Lyon, France)
